Peasants In Armor — Privacy Policy

Effective date: October 17, 2026
Last updated: October 17, 2026
Developer/operator: That Ninja
Support contact: thatninja1037@gmail.com

This Privacy Policy explains how That Ninja ("That Ninja," "we," "us," or "our") handles information in connection with *Peasants In Armor* ("Game"), including its online accounts, character systems, gameplay features, in-game text chat, and Discord Rich Presence integration.

We aim to describe the Game's actual information practices, not practices that have not been implemented or verified. This is a draft policy. Items marked for operator verification must be resolved before publication.

1. Who operates the Game

Peasants In Armor is operated by **That Ninja**, based in Washington State, United States.

For privacy questions, requests, or concerns, contact:

Email: thatninja1037@gmail.com

Operator address or additional contact details: [Add a mailing address or other contact details if required or desired.]

2. Who may use the Game

The Game is intended for people aged **13 or older** and is not intended for children under 13.

Do not create an account if you are under 13. If we learn that a child under 13 has provided personal information through the Game, we may take steps to restrict or terminate the account and address the information as required by applicable law.

If you believe a child under 13 has provided personal information to the Game, contact us at **thatninja1037@gmail.com**.

The operator must verify whether the Game has an age gate, how age reports are handled, and what procedures apply if information from an under-13 user is discovered.

3. Information we may handle

The Game uses accounts and stores character and gameplay information. The following categories describe information associated with the Game, but the exact fields and technical collection practices must be confirmed against the current implementation.

A. Account information

The Game uses username-and-password accounts. Information associated with account operation may include:

- Username or account identifier.
- Password credential data used to authenticate the account.
- Account status and information needed to administer or support the account.

Critical security disclosure: The operator has indicated that passwords may currently be stored in plaintext. This is a serious security issue. Plaintext passwords can expose users to account compromise if the data is accessed by an unauthorized person. The Game should not accept real player passwords while this condition exists. Before launch or continued operation with real accounts, implement a reputable password-hashing scheme and do not retain readable passwords.

This draft does not claim that passwords are hashed, encrypted, or otherwise securely stored. The operator must update this description after the implementation has been corrected and verified.

B. Character and gameplay information

The Game may store information associated with a player's characters and activity, such as:

- Character names and other character information.
- Character creation information, including in-game birthday data if used.
- Character progression, state, inventory, or other game-state information, where implemented.
- Gameplay statistics, battle results, kills, records, and related progress data, where implemented.
- Account-associated game settings or status, where implemented.

The exact data fields depend on the current Game implementation. The operator should remove any listed category that is not collected and add any material category that is collected but missing here.

C. In-game text chat and submitted content

The Game includes in-game text chat. Text submitted through chat may be processed to deliver messages to other players and may be stored or logged depending on the server and Game implementation.

Chat content may include personal information if a player chooses to share it. Players should avoid posting passwords, financial information, private contact details, or other sensitive information in chat.

Operator verification required: Confirm whether chat messages are stored in a database, retained in server logs, visible to moderators, reviewed manually, or processed by any automated moderation system. This policy does not assert that any particular chat-review or logging system exists.

D. Technical and connection information

Depending on the Game's server configuration, hosting setup, and diagnostic practices, technical information may be processed or generated, potentially including IP addresses, connection timestamps, error reports, server logs, and information needed to detect abuse or troubleshoot service problems.

The operator has not confirmed the precise technical information collected or retained. We therefore do not claim that all of these items are collected, nor that they are not collected.

Operator verification required: Inspect the Game server, Oracle Cloud Infrastructure configuration, application logs, firewall or network logs, and any diagnostic tools to determine which technical information is actually recorded, who can access it, and how long it is retained.

E. Discord Rich Presence

The Game may use Discord Rich Presence to display Game activity through the Discord client. Depending on the implementation, this may display details such as the Game name, current activity, or a location or status within the Game.

Rich Presence is not, by itself, a claim that the Game uses Discord to authenticate accounts or links a Discord account to a Game account. The exact activity fields and technical behavior must be verified against the current implementation.

Discord processes information under its own terms and privacy policy. If the Game's Rich Presence integration causes activity information to be displayed through Discord, Discord's handling of that information is governed by Discord's own services and policies.

Operator verification required: Confirm precisely which Rich Presence fields are sent, whether any player identifier or unique data is included, and whether any other Discord API or service is used. Do not claim that no information is shared with Discord until the implementation has been checked.

4. How we use information

Depending on the feature and the information actually collected, we may use information to:

- Create, authenticate, maintain, and support player accounts.
- Save and restore characters, progression, gameplay statistics, and other game state.
- Deliver online gameplay and in-game text chat.
- Display Game activity through Discord Rich Presence, if enabled.
- Enforce the Terms of Service and respond to reports of cheating, exploits, harassment, abuse, account theft, impersonation, or security threats.
- Diagnose technical errors, maintain server operations, and investigate service disruptions.
- Respond to support requests, account-deletion requests, and other player inquiries.
- Protect the Game, players, and systems from fraud, unauthorized access, and misuse.

- Comply with legal obligations and address or defend legal claims where necessary.

We do not claim to use personal information for advertising, behavioral profiling, or sale to data brokers. If the Game's practices change, this policy must be updated where appropriate.

5. Hosting and service providers

The Game is hosted using **Oracle Cloud Infrastructure (OCI)**.

Hosting providers may process information as necessary to provide the hosting service. The exact OCI services, server regions, contractual arrangements, access controls, subprocessors, and logging configuration have not been confirmed for this draft.

We may also rely on third-party services necessary for features that are actually enabled, such as Discord Rich Presence. We will not represent that a particular provider receives particular categories of information unless that data flow has been verified.

We do not promise that no other service providers have access to information. The operator should identify any additional databases, monitoring tools, analytics, crash-reporting services, email providers, or other services used by the Game before publication.

6. How information may be disclosed

Information may be disclosed in the following circumstances, to the extent applicable to the actual implementation:

- **To other players:** Information that the Game displays publicly or sends through gameplay or chat, such as character names, gameplay status, statistics, or chat messages, may be visible to other players.
- **To hosting or technical providers:** Information may be processed by OCI and any other service providers actually used to operate the Game.
- **For security and enforcement:** Information may be accessed, preserved, or disclosed when reasonably necessary to investigate suspected cheating, abuse, account compromise, security incidents, or violations of the Terms.
- **For legal reasons:** Information may be disclosed when required by law or legal process, or where reasonably necessary to protect rights, safety, and security, subject to applicable law.
- **Business changes:** If the Game or its operation is transferred, information may be transferred as part of that transaction, subject to applicable legal requirements and appropriate safeguards.

We do not claim to sell personal information. The operator should verify whether any third-party SDKs, analytics services, or other integrations share information in ways that require additional disclosures.

7. Retention of information

Our intended approach is to retain account-associated information while an account remains active and to process deletion requests through the available in-game or email procedures.

This is not a promise that every record will be deleted immediately or that every backup will be erased at the same time. Some information may persist for a limited period in backups, security records, server logs, or other systems, or may be retained where reasonably necessary to resolve disputes, prevent abuse, or comply with legal obligations.

The exact retention periods have not been established for this draft. Before publication, the operator should determine how long account records, chat content, technical logs, backups, and moderation records remain available and should disclose specific periods where appropriate.

We do not claim that data is retained indefinitely, deleted on a fixed schedule, or removed from every system immediately unless those practices are confirmed.

8. Access, correction, and account deletion

You may contact us to ask about information associated with your account, request correction of inaccurate information where feasible, or request account deletion.

Contact for requests: thatninja1037@gmail.com

In-game deletion: [Insert the exact menu path, button name, or instructions for requesting account deletion in the Game. If this feature is not implemented, do not state that it is available until it is.]

Email deletion: Send a request to thatninja1037@gmail.com from the email address or through the account-identification process that we specify. Because Game accounts may not have a registered email address, the operator must establish a workable process for verifying that the requester controls the account. Do not ask players to send their passwords.

For account-deletion requests, we intend to:

1. Verify the request and the requester's authority over the account using an appropriate process.
2. Identify the account covered by the request.
3. Delete or de-identify account-associated information that can be deleted, subject to applicable law and legitimate operational needs.
4. Explain, where appropriate, if some information must be retained and why.
5. Communicate the outcome or any additional steps needed to complete the request.

Operator completion required: Establish the actual deletion workflow and its expected response time before publication. Add a response target only if you can meet it consistently. Decide how deletion affects character data, chat messages visible to other players, moderation records, server logs, and backups. Do not promise complete or immediate deletion unless the systems support it.

9. Security

We take the importance of protecting player information seriously. No online service can guarantee absolute security, and the security of information depends on the Game's actual design, configuration, and operation.

Urgent unresolved issue: The operator has indicated that passwords may be stored in plaintext. This must be corrected before real player accounts are operated. Passwords should be processed using a reputable password-hashing algorithm designed for password storage, with appropriate parameters and unique salts. They should not be stored or logged in readable form.

The operator should also review access to the database and server, restrict administrative permissions, protect secrets and credentials, configure appropriate backups, and assess how to respond to a suspected exposure. These are recommendations, not claims that such measures are already implemented.

If a security incident occurs, we will evaluate the circumstances and take steps required by applicable law. This policy does not promise a specific incident-response process or notification timeline until those procedures are established and verified.

10. Players aged 13–17

The Game is intended for people aged 13 and older. Players under the age of legal majority may need parent or guardian involvement under applicable law.

Players should not post personal information in chat and should report suspected abuse, threats, or account compromise to the operator.

The operator should assess whether any additional requirements apply to younger players based on the Game's audience, features, information practices, and applicable law. This policy does not assert that a particular parental-consent process has been implemented.

11. International players

The operator is based in Washington State, United States, and the Game may be accessible from other locations. If you access the Game from outside the United States, information may be processed in the United States or in other locations used by the hosting or service providers, depending on the actual infrastructure.

The operator has not confirmed all server regions, data-transfer arrangements, or international legal requirements. Those arrangements should be reviewed before making more specific statements about where information is stored or transferred.

12. Third-party services and links

The Game may rely on third-party services such as OCI hosting and Discord Rich Presence. Those services have their own terms, privacy policies, and practices. This Privacy Policy does not govern how an independent third party handles information under its own services.

The operator should add links to the relevant third-party privacy policies and identify any additional services that the Game actually uses.

13. Future changes and monetization

The Game may change over time, including by adding features or monetization. If future features change the categories of information collected, the purposes for which it is used, or the parties with whom it is shared, this Privacy Policy will be reviewed and updated as appropriate.

The operator should provide notice of material changes through an appropriate channel where required or appropriate. The actual notice method must be confirmed before it is described as a guaranteed practice.

14. Your choices and questions

For privacy questions, account-information inquiries, correction requests, or account-deletion requests, contact:

That Ninja
Email: thatninja1037@gmail.com

Please do not include your password in a support message.

We may need sufficient information to identify the account and verify that you are authorized to make the request. Any such verification should be proportionate and should not require disclosure of a password.

15. Updates to this Privacy Policy

We may update this Privacy Policy as the Game and its data practices evolve. The “Last updated” date at the top indicates when the document was most recently revised.

The operator should publish the current version where players can find it and determine how material changes will be communicated. If a change requires consent or notice under applicable law, the operator should follow the applicable requirements.

16. Contact

For questions or concerns about this Privacy Policy or the handling of information in *Peasants In Armor*, contact:

That Ninja
Email: thatninja1037@gmail.com

Operator verification before publication: Confirm the exact data fields collected, password-storage implementation, chat logging, technical logs, hosting regions and services, third-party integrations, retention practices, and operational account-deletion process. This draft should be revised if the verified practices differ from the descriptions above.
